# **Chapter 1**

# **EMPIRE Data Assimilation Documentation**

**Author** 

Philip A. Browne p.browne@reading.ac.uk

Date

Time-stamp: <2014-09-24 16:15:36 pbrowne>

# 1.1 Downloading

These codes are hosted on www.bitbucket.org and can be attained with the following commands:

```
git clone git@bitbucket.org:pbrowne/empire-data-assimilation.git
```

or

wget https://bitbucket.org/pbrowne/empire-data-assimilation/get/aa31fdfc3912.zip && gunzip aa31fdfc3912.zip

### Copyright

These codes are distributed under the GNU GPU v3 Licence. See LICENCE.txt.

# 1.2 Compiling

#### 1.2.1 Compilation of the source code

The Makefile must be editted for the specific compiler setup. In the main directory you will find the file Makefile. Edit the variables as follows:

- FC The fortran compiler
- FCOPTS The options for the fortran compiler
- LIB\_LIST The libraries to be called. Note this must include BLAS

To compile the source code, simply then type the command

If successful, the following executables are created in the bin/ folder:

- · empire
- · alltests
- test h
- · test hghtr
- test\_q
- test\_r

To remove the object and executable files if compilation fails for some reason, run the following:

make clean

#### 1.2.2 Compilation of the documentation

Documentation of the code is automatically generated using Doxygen, dot and pdflatex.

All of these packages must be installed for the following to work.

make docs

This will make an html webpage for the code, the mainpage for which is located in doc/html/index.html.

A latex version of the documentation will be built to the file doc/latex/refman.pdf.

To simply make the html version of the documentation (if pdflatex is not available) then use the command

make doc\_html

## 1.3 Customising for specific models

This is where the science and all the effort should happen!!

The file model\_specific.f90 should be editted for the specific model which you wish to use. This contains a number of subroutines which need to be adapted for the model and the observation network. We list these subsequently.

- configure\_model This is called early in the code and can be used to read in any data from files before subsequently using them in the below operations.
- h This is the observation operator
- · ht This is the transpose of the observation operator
- r This is the observation error covariance matrix R
- rhalf This is the square root of the observation error covariance matrix  $R^{\frac{1}{2}}$
- solve\_r This is a linear solve with the observation error covariance matrix, i.e. given b, find x such that Rx = b or indeed,  $x = R^{-1}b$
- q This is the model error covariance matrix Q
- qhalf This is the square root model error covariance matrix  $Q^{\frac{1}{2}}$
- solve hight plus r This is a linear solve with the matrix  $(HQH^T + R)$

Not all of these subroutines will be required for each filtering method you wish to use, so it may be advantageous to only implement the necessary ones.

1.4 Testing 3

## 1.4 Testing

You can test your user supplied routines by running the test codes found in the folder bin/.

These are by no means full-proof ways of ensuring that you have implemented things correctly, but should at least check what you have done for logical consistency.

For example, they will test if  $HH^Tx = x$ , and if  $Q^{\frac{1}{2}}Q^{\frac{1}{2}}x = Qx$  for various different vectors x.

# 1.5 Linking to your model using EMPIRE

Full instructions on how to put the EMPIRE MPI commands into a new model can be found at www.met.-reading.ac.uk/~darc/empire.

# 1.6 Running

For example, to run **N\_MDL** copies of the model with **N\_DA** copies of empire, then the following are possible:

```
mpirun -np N_MDL model_executable : -np N_DA empire
aprun -n N_MDL -N N_MDL model_executable : -n N_DA -N N_DA empire
```

The empire executable is controlled by the namelist data file pf\_parameters.dat. As such, this file should be put in the directory where empire is executed.

# 1.7 Bug Reports and Functionality Requests

While the code is not too large, you may email me the issue or request here.

However there is a webpage set up for this:

https://bitbucket.org/pbrowne/empire-data-assimilation/issues

<b>EMPIRE Data Assimilation Documentatio</b>	n
--	---

# Chapter 2

# **Data Type Index**

# 2.1 Data Types List

Here are the data types with brief descriptions:

comms	
Module containing EMPIRE coupling data	9
histogram_data	
Module to control what variables are used to generate rank histograms	11
hqht_plus_r	12
pf_control	
Module pf_control holds all the information to control the the main program	12
pf_control::pf_control_type	16
qdata	
Module as a place to store user specified data for $Q$	20
random	
A module for random number generation from the following distributions:	22
rdata	
Module to hold user supplied data for $R$ observation error covariance matrix $\ldots \ldots \ldots$	31
sizes	
Module that stores the dimension of observation and state spaces	33

6 **Data Type Index** 

# **Chapter 3**

# File Index

# 3.1 File List

Here is a list of all files with brief descriptions:

8 File Index

# **Chapter 4**

# **Data Type Documentation**

### 4.1 comms Module Reference

Module containing EMPIRE coupling data.

#### **Public Member Functions**

- subroutine allocate data
- subroutine deallocate\_data
- subroutine initialise\_mpi

subroutine to make EMPIRE connections and saves details into pf\_control module

#### **Public Attributes**

- integer cpl\_mpi\_comm
- integer mype\_id
- integer myrank
- integer nproc
- integer pf\_mpi\_comm
- integer pfrank
- integer npfs
- integer, dimension(:), allocatable gblcount
- integer, dimension(:), allocatable gbldisp

## 4.1.1 Detailed Description

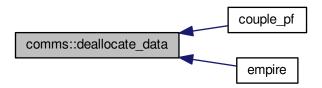

Module containing EMPIRE coupling data.

# 4.1.2 Member Function/Subroutine Documentation

4.1.2.1 subroutine comms::allocate\_data ( )

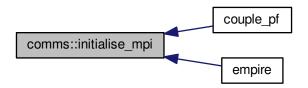

#### 4.1.2.2 subroutine comms::deallocate\_data ( )

Here is the caller graph for this function:

#### 4.1.2.3 subroutine comms::initialise\_mpi ( )

subroutine to make EMPIRE connections and saves details into pf\_control module Here is the caller graph for this function:

#### 4.1.3 Member Data Documentation

- 4.1.3.1 integer comms::cpl\_mpi\_comm
- 4.1.3.2 integer, dimension(:), allocatable comms::gblcount
- 4.1.3.3 integer, dimension(:), allocatable comms::gbldisp
- 4.1.3.4 integer comms::mype\_id
- 4.1.3.5 integer comms::myrank
- 4.1.3.6 integer comms::npfs
- 4.1.3.7 integer comms::nproc
- 4.1.3.8 integer comms::pf\_mpi\_comm

#### 4.1.3.9 integer comms::pfrank

The documentation for this module was generated from the following file:

• src/utils/comms.f90

## 4.2 histogram\_data Module Reference

Module to control what variables are used to generate rank histograms.

#### **Public Member Functions**

- subroutine load\_histogram\_data subroutine to read from variables\_hist.dat which variables to be used to make the rank histograms
- subroutine kill\_histogram\_data
   subroutine to clean up arrays used in rank histograms

#### **Public Attributes**

- integer, dimension(:), allocatable rank\_hist\_list
- integer, dimension(:), allocatable rank\_hist\_nums
- integer rhl n
- integer rhn\_n

#### 4.2.1 Detailed Description

Module to control what variables are used to generate rank histograms.

#### 4.2.2 Member Function/Subroutine Documentation

4.2.2.1 subroutine histogram\_data::kill\_histogram\_data( )

subroutine to clean up arrays used in rank histograms

4.2.2.2 subroutine histogram\_data::load\_histogram\_data( )

subroutine to read from variables\_hist.dat which variables to be used to make the rank histograms

#### 4.2.3 Member Data Documentation

- 4.2.3.1 integer, dimension(:), allocatable histogram\_data::rank\_hist\_list
- 4.2.3.2 integer, dimension(:), allocatable histogram\_data::rank\_hist\_nums
- 4.2.3.3 integer histogram\_data::rhl\_n
- 4.2.3.4 integer histogram\_data::rhn\_n

The documentation for this module was generated from the following file:

## 4.4 pf\_control Module Reference

module pf\_control holds all the information to control the the main program

Collaboration diagram for pf\_control:

#### **Data Types**

• type pf\_control\_type

#### **Public Member Functions**

- subroutine set\_pf\_controls
  - subroutine to ensure pf\_control data is ok
- subroutine parse\_pf\_parameters

subroutine to read the namelist file and save it to pf datatype Here we read pf\_parameters.dat

- subroutine allocate\_pf
  - subroutine to allocate space for the filtering code
- subroutine deallocate\_pf

subroutine to deallocate space for the filtering code

#### **Public Attributes**

• type(pf\_control\_type) pf

the derived data type holding all controlling data

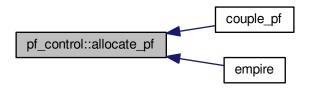

#### 4.4.1 Detailed Description

module pf\_control holds all the information to control the the main program

#### 4.4.2 Member Function/Subroutine Documentation

4.4.2.1 subroutine pf\_control::allocate\_pf()

subroutine to allocate space for the filtering code

4.4.2.2 subroutine pf\_control::deallocate\_pf ( )

subroutine to deallocate space for the filtering code

4.4.2.3 subroutine pf\_control::parse\_pf\_parameters ( )

subroutine to read the namelist file and save it to pf datatype Here we read pf\_parameters.dat pf\_parameters.dat is a fortran namelist file. As such, within it there must be a line beginning &pf\_params

To make it (probably) work, ensure there is a forward slash on the penultimate line and a blank line to end the file This is just the fortran standard for namelists though.

On to the content...in any order, the pf\_parameters.dat may contain the following things: Integers:

- time\_obs
- time\_bwn\_obs

Reals, double precision:

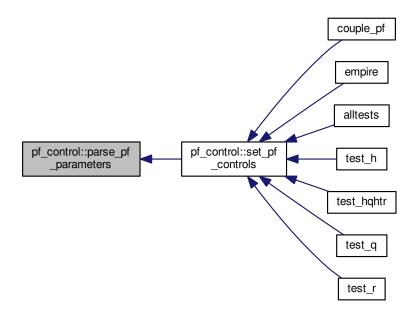

- nudgefac
- nfac
- ufac
- Qscale
- keep

2 Characters:

- type
- 1 Character:
  - init

Logicals:

- gen\_Q
- gen\_data
- use\_talagrand
- use\_weak
- use\_var
- use\_traj
- use\_rmse
- human\_readable

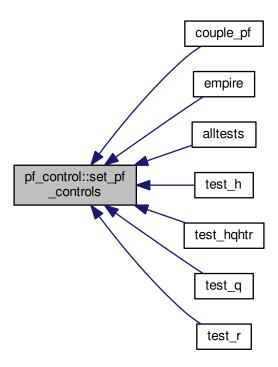

#### 4.4.2.4 subroutine pf\_control::set\_pf\_controls ( )

subroutine to ensure pf\_control data is ok

Here is the call graph for this function:

#### 4.4.3 Member Data Documentation

#### 4.4.3.1 type(pf\_control\_type) pf\_control::pf

the derived data type holding all controlling data

The documentation for this module was generated from the following file:

• src/controlers/pf\_control.f90

# 4.5 pf\_control::pf\_control\_type Type Reference

#### **Public Attributes**

• integer nens

the total number of ensemble members

- real(kind=kind(1.0d0)), dimension(:), allocatable weight the negative log of the weights of the particles
- integer time\_obs

the number of observations we will assimilate

• integer time\_bwn\_obs

the number of model timesteps between observations

• real(kind=kind(1.0d0)) nudgefac

the nudging factor

logical gen\_data

true generates synthetic obs for a twin experiment

· logical gen\_q

true attempts to build up Q from long model run

· logical human readable

unused

• integer timestep =0

the current timestep as the model progresses

real(kind=kind(1.0d0)), dimension(:,:), allocatable psi

state vector of ensemble members on this mpi process

• real(kind=kind(1.0d0)), dimension(:), allocatable mean

mean state vector

• real(kind=kind(1.0d0)) nfac

standard deviation of normal distribution in mixture density

real(kind=kind(1.0d0)) ufac

half width of the uniform distribution in mixture density

- real(kind=kind(1.0d0)) efac
- real(kind=kind(1.0d0)) keep

proportion of particles to keep in EWPF EW step

• real(kind=kind(1.0d0)) time

dunno

• real(kind=kind(1.0d0)) qscale

scalar to multiply Q by

integer couple\_root

empire master processor

logical use\_talagrand

switch if true outputs rank histograms

· logical use\_weak

switch unused

• logical use\_mean

switch if true outputs ensemble mean

logical use\_var

switch if true outputs ensemble variance

· logical use traj

switch if true outputs trajectories

logical use\_rmse

switch if true outputs Root Mean Square Errors

integer, dimension(:,:),

allocatable talagrand

storage for rank histograms

integer count

number of ensemble members associated with this MPI process

• integer, dimension(:), allocatable particles

particles associates with this MPI process

character(2) type

which filter to use

character(1) init

which method to initialise ensemble

#### 4.5.1 Member Data Documentation

4.5.1.1 integer pf\_control::pf\_control\_type::count

number of ensemble members associated with this MPI process

4.5.1.2 integer pf\_control::pf\_control\_type::couple\_root

empire master processor

4.5.1.3 real(kind=kind(1.0d0)) pf\_control::pf\_control\_type::efac

4.5.1.4 logical pf\_control::pf\_control\_type::gen\_data

true generates synthetic obs for a twin experiment

4.5.1.5 logical pf\_control::pf\_control\_type::gen\_q

true attempts to build up Q from long model run

4.5.1.6 logical pf\_control::pf\_control\_type::human\_readable

unused

4.5.1.7 character(1) pf\_control::pf\_control\_type::init

which method to initialise ensemble

4.5.1.8 real(kind=kind(1.0d0)) pf\_control::pf\_control\_type::keep

proportion of particles to keep in EWPF EW step

4.5.1.9 real(kind=kind(1.0d0)), dimension(:), allocatable pf\_control::pf\_control\_type::mean

mean state vector

4.5.1.10 integer pf\_control::pf\_control\_type::nens

the total number of ensemble members

4.5.1.11 real(kind=kind(1.0d0)) pf\_control::pf\_control\_type::nfac

standard deviation of normal distribution in mixture density

4.5.1.12 real(kind=kind(1.0d0)) pf\_control::pf\_control\_type::nudgefac

the nudging factor

4.5.1.13 integer, dimension(:), allocatable pf\_control::pf\_control\_type::particles particles associates with this MPI process 4.5.1.14 real(kind=kind(1.0d0)), dimension(:,:), allocatable pf\_control::pf\_control\_type::psi state vector of ensemble members on this mpi process 4.5.1.15 real(kind=kind(1.0d0)) pf\_control::pf\_control\_type::qscale scalar to multiply Q by 4.5.1.16 integer, dimension(:,:), allocatable pf\_control::pf\_control\_type::talagrand storage for rank histograms 4.5.1.17 real(kind=kind(1.0d0)) pf\_control::pf\_control\_type::time dunno 4.5.1.18 integer pf\_control::pf\_control\_type::time\_bwn\_obs the number of model timesteps between observations 4.5.1.19 integer pf\_control::pf\_control\_type::time\_obs the number of observations we will assimilate 4.5.1.20 integer pf\_control::pf\_control\_type::timestep =0 the current timestep as the model progresses 4.5.1.21 character(2) pf\_control::pf\_control\_type::type which filter to use 4.5.1.22 real(kind=kind(1.0d0)) pf\_control::pf\_control\_type::ufac half width of the uniform distribution in mixture density 4.5.1.23 logical pf\_control::pf\_control\_type::use\_mean switch if true outputs ensemble mean

```
4.5.1.25 logical pf_control::pf_control_type::use_talagrand
switch if true outputs rank histograms
4.5.1.26 logical pf_control::pf_control_type::use_traj
switch if true outputs trajectories
4.5.1.27 logical pf_control::pf_control_type::use_var
switch if true outputs ensemble variance
```

4.5.1.28 logical pf\_control::pf\_control\_type::use\_weak

switch unused

4.5.1.29 real(kind=kind(1.0d0)), dimension(:), allocatable pf\_control::pf\_control\_type::weight

the negative log of the weights of the particles

The documentation for this type was generated from the following file:

#### 4.7.3 Member Data Documentation

4.7.3.1 integer, parameter random::dp = SELECTED\_REAL\_KIND(12, 60)

The documentation for this module was generated from the following file:

• src/utils/random\_d.f90

## 4.8 rdata Module Reference

Module to hold user supplied data for R observation error covariance matrix.

#### **Public Member Functions**

- subroutine loadr

  Subroutine to load data for R.
- subroutine killr

## **Public Attributes**

- integer rn
- integer rne

- integer, dimension(:), allocatable rrow
- integer, dimension(:), allocatable rcol
- real(kind=kind(1.0d0)), dimension(:), allocatable rval
- real(kind=kind(1.0d0)), dimension(:), allocatable rdiag

## 4.8.1 Detailed Description

Module to hold user supplied data for *R* observation error covariance matrix.

#### 4.8.2 Member Function/Subroutine Documentation

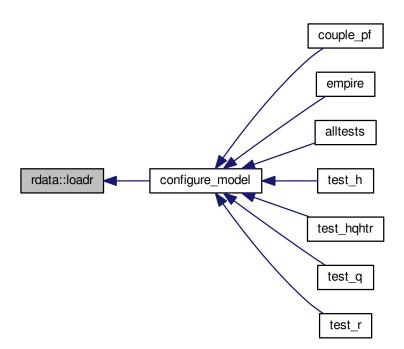

4.8.2.1 subroutine rdata::killr ( )

SUbroutine to deallocate R data

4.8.2.2 subroutine rdata::loadr ( )

Subroutine to load data for R.

Here is the caller graph for this function:

## 4.8.3 Member Data Documentation

4.8.3.1 integer, dimension(:), allocatable rdata::rcol

4.8.3.2 real(kind=kind(1.0d0)), dimension(:), allocatable rdata::rdiag

- 4.8.3.3 integer rdata::rn
- 4.8.3.4 integer rdata::rne
- 4.8.3.5 integer, dimension(:), allocatable rdata::rrow
- 4.8.3.6 real(kind=kind(1.0d0)), dimension(:), allocatable rdata::rval

The documentation for this module was generated from the following file:

• src/data/Rdata.f90

## 4.9 sizes Module Reference

Module that stores the dimension of observation and state spaces.

## **Public Attributes**

• integer obs\_dim

size of the observation space

• integer state\_dim

dimension of the model

## 4.9.1 Detailed Description

Module that stores the dimension of observation and state spaces.

## 4.9.2 Member Data Documentation

4.9.2.1 integer sizes::obs\_dim

size of the observation space

4.9.2.2 integer sizes::state\_dim

dimension of the model

The documentation for this module was generated from the following file:

• src/controlers/sizes.f90

# **Chapter 5**

# **File Documentation**

## 5.1 model\_specific.f90 File Reference

#### **Functions/Subroutines**

```
    subroutine configure_model
    subroutine called initially to set up details and data for model specific functions
```

subroutine solve\_r (y, v, t)

subroutine to take an observation vector y and return v in observation space.

subroutine solve\_hqht\_plus\_r (y, v, t)
 subroutine to take an observation vector y and return v in observation space.

subroutine q (nrhs, x, Qx)
 subroutine to take a full state vector x and return Qx in state space.

• subroutine qhalf (nrhs, x, Qx) subroutine to take a full state vector x and return  $Q^{1/2}x$  in state space.

subroutine r (nrhs, y, Ry, t)
 subroutine to take an observation vector x and return Rx in observation space.

subroutine rhalf (nrhs, y, Ry, t)
 subroutine to take an observation vector x and return Rx in observation space.

subroutine h (x, hx, t)
 subroutine to take a full state vector x and return H(x) in observation space.

• subroutine ht (y, x, t)  $subroutine \ to \ take \ an \ observation \ vector \ y \ and \ return \ x = H^T(y) \ in \ full \ state \ space.$ 

subroutine dist (xp, yp, dis, t)

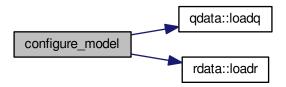

subroutine to compute the distance between the variable in the state vector and the variable in the observations

#### 5.1.1 Function/Subroutine Documentation

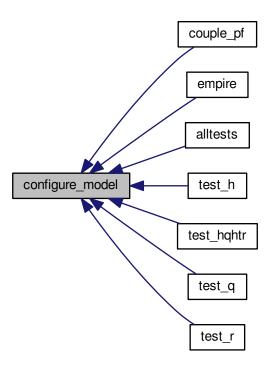

```
5.1.1.1 subroutine configure_model ( )
```

subroutine called initially to set up details and data for model specific functions

Here is the call graph for this function:

Here is the caller graph for this function:

5.1.1.2 subroutine dist ( integer, intent(in) xp, integer, intent(in) yp, real(kind=kind(1.0d0)), intent(out) dis, integer, intent(in) t) subroutine to compute the distance between the variable in the state vector and the variable in the observations Compute dist(x(xp), y(yp))

#### **Parameters**

in	хр	the index in the state vector
in	ур	the index in the observation vector
in	t	the current time index for observations
out	dis	the distance between x(xp) and y(yp)

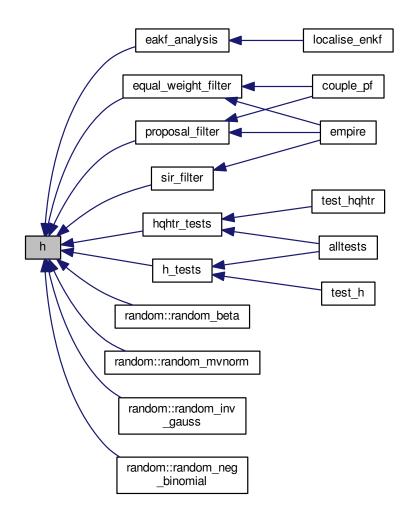

5.1.1.3 subroutine h ( real(kind=rk), dimension(state\_dim,pf%count), intent(in) x, real(kind=rk), dimension(obs\_dim,pf%count), intent(out) hx, integer, intent(in) t)

subroutine to take a full state vector  $\boldsymbol{x}$  and return  $\boldsymbol{H}(\boldsymbol{x})$  in observation space.

## Given x compute Hx

#### **Parameters**

in	X	the input vectors in state space
out	hx	the resulting vector in observation space where $hx = Hx$
in	t	the timestep

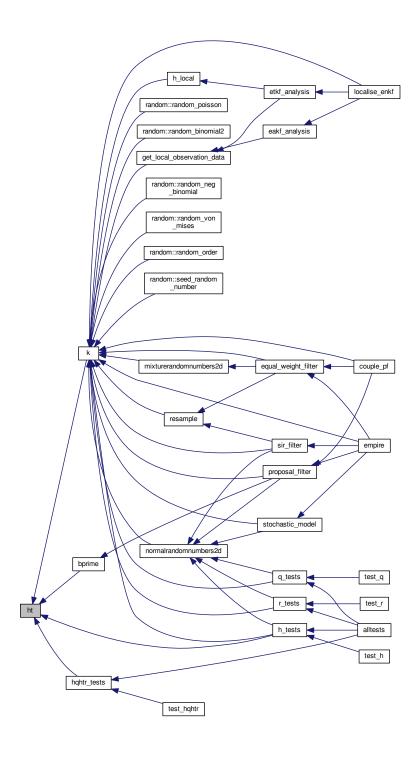

5.1.1.4 subroutine ht ( real(kind=rk), dimension(obs\_dim,pf%count), intent(in) y, real(kind=rk), dimension(state\_dim,pf%count), intent(out) x, integer, intent(in) t)

subroutine to take an observation vector  $\mathbf{y}$  and return  $\mathbf{x} = H^T(\mathbf{y})$  in full state space.

Given y compute  $x = H^T(y)$ 

in	у	the input vectors in observation space
out	X	the resulting vector in state space where $\mathbf{x} = H^T \mathbf{y}$
in	t	the timestep

5.1.1.5 subroutine q ( integer, intent(in) *nrhs*, real(kind=rk), dimension(state\_dim,nrhs), intent(in) *x*, real(kind=rk), dimension(state\_dim,nrhs), intent(out) *Qx* )

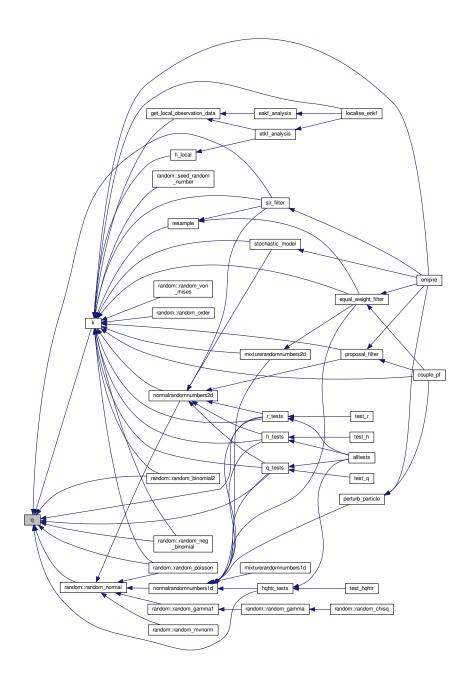

subroutine to take a full state vector x and return Qx in state space.

Given x compute Qx

#### **Parameters**

in	nrhs	the number of right hand sides
in	X	the input vector
out	qx	the resulting vector where $Qx = Qx$

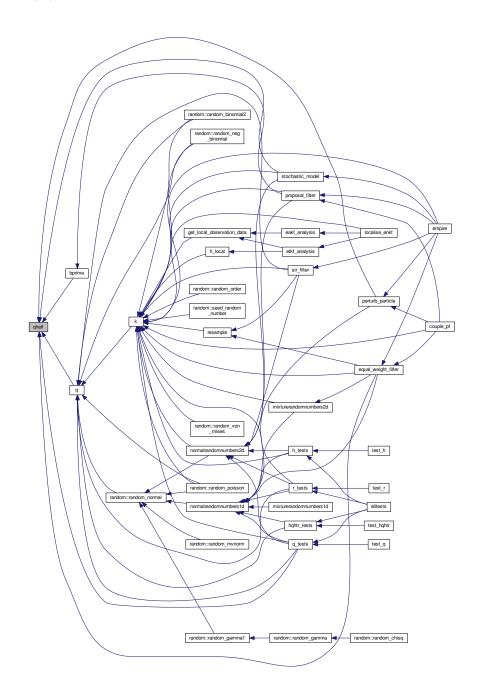

5.1.1.6 subroutine qhalf ( integer, intent(in) *nrhs*, real(kind=rk), dimension(state\_dim,nrhs), intent(in) *x*, real(kind=rk), dimension(state\_dim,nrhs), intent(out) *Qx* )

subroutine to take a full state vector  ${\bf x}$  and return  ${\bf Q}^{1/2}{\bf x}$  in state space.

Given x compute  $Q^{\frac{1}{2}}x$ 

in	nrhs	the number of right hand sides
in	X	the input vector
out	qx	the resulting vector where $Qx = Q^{rac{1}{2}}x$

Here is the caller graph for this function:

5.1.1.7 subroutine r ( integer, intent(in) *nrhs*, real(kind=rk), dimension(obs\_dim,nrhs), intent(in) *y*, real(kind=rk), dimension(obs\_dim,nrhs), intent(out) *Ry*, integer, intent(in) *t* )

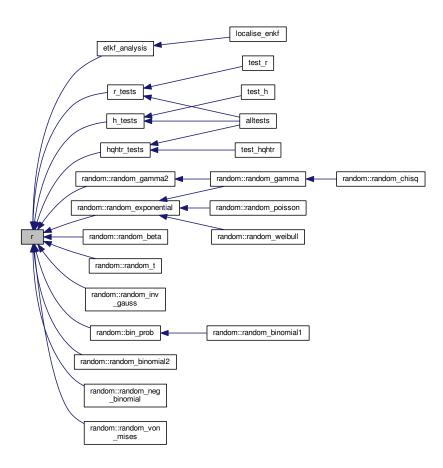

subroutine to take an observation vector x and return Rx in observation space.

Given y compute Ry

#### **Parameters**

in	nrhs	the number of right hand sides
in	у	the input vector
out	ry	the resulting vectors where $Ry = Ry$
in	t	the timestep

Here is the caller graph for this function:

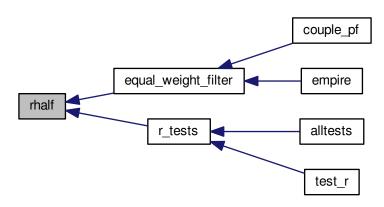

5.1.1.8 subroutine rhalf ( integer, intent(in) *nrhs*, real(kind=rk), dimension(obs\_dim,nrhs), intent(in) *y*, real(kind=rk), dimension(obs\_dim,nrhs), intent(out) *Ry*, integer, intent(in) *t* )

subroutine to take an observation vector x and return Rx in observation space.

Given y compute  $R^{\frac{1}{2}}y$ 

in	nrhs	the number of right hand sides
in	У	the input vector
out	ry	the resulting vector where $Ry = R^{\frac{1}{2}}y$
in	t	the timestep

Here is the caller graph for this function:

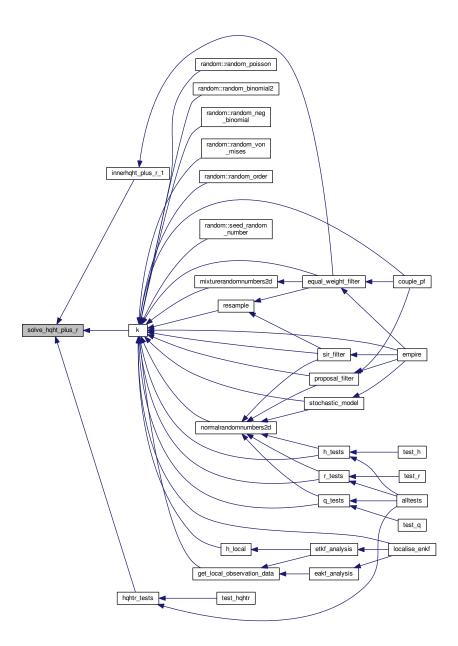

5.1.1.9 subroutine solve\_hqht\_plus\_r ( real(kind=rk), dimension(obs\_dim), intent(in) y, real(kind=rk), dimension(obs\_dim), intent(out) v, integer, intent(in) t)

subroutine to take an observation vector  $\boldsymbol{y}$  and return  $\boldsymbol{v}$  in observation space.

Given y find v such that  $(HQH^T + R)v = y$ 

in	у	the input vector
out	V	the result where $v = (HQH^T + R)^{-1}y$
in	t	the timestep

5.1.1.10 subroutine solve\_r ( real(kind=rk), dimension(obs\_dim,pf%count), intent(in) y, real(kind=rk), dimension(obs\_dim,pf%count), intent(out) v, integer, intent(in) t)

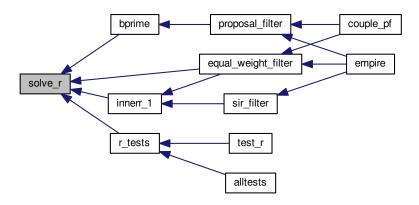

subroutine to take an observation vector y and return v in observation space.

Given y find v such that Rv = y

in	у	input vector
----	---	--------------

out	V	result vector where $v = R^{-1}y$
in	t	the timestep

Here is the caller graph for this function:

- 5.16.1.2 subroutine stochastic\_model ( )

subroutine to simply move the model forward in time one timestep PAB 21-05-2013 Here is the call graph for this function:

Here is the caller graph for this function:

## 5.17 src/operations/gen\_rand.f90 File Reference

## **Functions/Subroutines**

- subroutine uniformrandomnumbers1d (minv, maxv, n, phi)

  generate one dimension of uniform random numbers
- subroutine normalrandomnumbers1d (mean, stdev, n, phi)

  generate one dimension of Normal random numbers
- subroutine normalrandomnumbers2d (mean, stdev, n, k, phi)

generate two dimensional Normal random numbers

- subroutine mixturerandomnumbers1d (mean, stdev, ufac, epsi, n, phi, uniform) generate one dimensional vector drawn from mixture density
- subroutine mixturerandomnumbers2d (mean, stdev, ufac, epsi, n, k, phi, uniform) generate two dimensional vector, each drawn from mixture density
- subroutine random\_seed\_mpi (pfid)

Subroutine to set the random seed across MPI threads.

## 5.17.1 Function/Subroutine Documentation

5.17.1.1 subroutine mixturerandomnumbers1d ( real(kind=kind(1.0d0)), intent(in) *mean*, real(kind=kind(1.0d0)), intent(in) *stdev*, real(kind=kind(1.0d0)), intent(in) *ufac*, real(kind=kind(1.0d0)), intent(in) *epsi*, integer, intent(in) *n*, real(kind=kind(1.0d0)), dimension(n), intent(out) *phi*, logical, intent(out) *uniform* )

generate one dimensional vector drawn from mixture density

#### **Parameters**

		NA
in	mean	Mean of normal distribution
in	stdev	Standard deviation of normal distribution
in	ufac	half-width of uniform distribution that is centered on the mean
in	epsi	Proportion controlling mixture draw. if random_number > epsi then draw from
		uniform, else normal
in	n	size of output vector
out	phi	n dimensional mixture random numbers
out	uniform	True if mixture drawn from uniform. False if drawn from normal

Here is the call graph for this function:

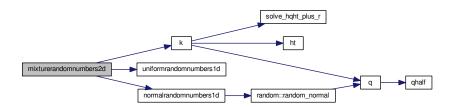

5.17.1.2 subroutine mixturerandomnumbers2d ( real(kind=kind(1.0d0)), intent(in) *mean*, real(kind=kind(1.0d0)), intent(in) *stdev*, real(kind=kind(1.0d0)), intent(in) *ufac*, real(kind=kind(1.0d0)), intent(in) *epsi*, integer, intent(in) *n*, integer, intent(in) *k*, real(kind=kind(1.0d0)), dimension(n,k), intent(out) *phi*, logical, dimension(k), intent(out) *uniform* )

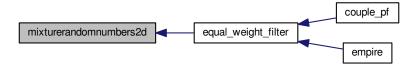

generate two dimensional vector, each drawn from mixture density

#### **Parameters**

in	mean	Mean of normal distribution
in	stdev	Standard deviation of normal distribution
in	ufac	half-width of uniform distribution that is centered on the mean
in	epsi	Proportion controlling mixture draw. if random_number > epsi then draw from
		uniform, else normal
in	n	first dimension of output vector
in	k	second dimension of output vector
out	phi	n,k dimensional mixture random numbers
out	uniform	k dimensional logical with uniform(i) True if phi(:,i) drawn from uniform. False if
		drawn from normal

Here is the caller graph for this function:

5.17.1.3 subroutine normalrandomnumbers1d ( real(kind=rk), intent(in) *mean*, real(kind=rk), intent(in) *stdev*, integer, intent(in) *n*, real(kind=rk), dimension(n), intent(out) *phi* )

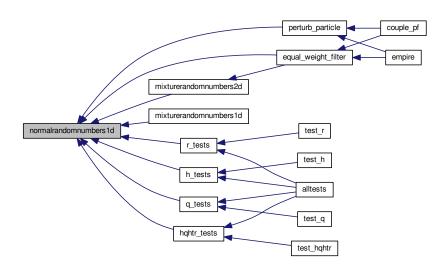

generate one dimension of Normal random numbers

#### **Parameters**

in	n	size of output vector
in	mean	mean of normal distribution
in	stdev	Standard Deviation of normal distribution
out	phi	n dimensional normal random numbers

Here is the call graph for this function:

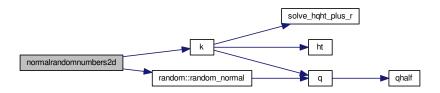

5.17.1.4 subroutine normalrandomnumbers2d ( real(kind=rk), intent(in) *mean*, real(kind=rk), intent(in) *stdev*, integer, intent(in) *n*, integer, intent(in) *k*, real(kind=rk), dimension(n,k), intent(out) *phi* )

generate two dimensional Normal random numbers

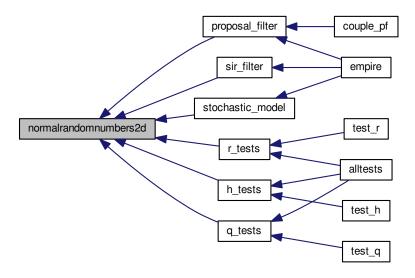

#### **Parameters**

in	n	first dimension of output vector
in	k	second dimension of output vector
in	mean	mean of normal distribution
in	stdev	Standard Deviation of normal distribution
out	phi	n,k dimensional normal random numbers

Here is the call graph for this function:

Here is the caller graph for this function:

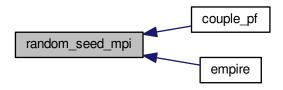

5.17.1.5 subroutine random\_seed\_mpi ( integer, intent(in) pfid )

Subroutine to set the random seed across MPI threads.

#### **Parameters**

ı			
	in	pfid	The process identifier of the MPI process

Here is the caller graph for this function:

5.17.1.6 subroutine uniformrandomnumbers1d ( real(kind=rk), intent(in) *minv*, real(kind=rk), intent(in) *maxv*, integer, intent(in) *n*, real(kind=rk), dimension(n), intent(out) *phi* )

generate one dimension of uniform random numbers

#### **Parameters**

in	n	size of output vector
in	minv	minimum value of uniform distribution
in	maxv	maximum value of uniform distribution
out	phi	n dimensional uniform random numbers

Here is the caller graph for this function:

## 5.18 src/operations/operator\_wrappers.f90 File Reference

#### **Functions/Subroutines**

- subroutine k (y, x)
  - Subroutine to apply K to a vector y in observation space where  $K := QH^T(HQH^T + R)^{-1}$ .
- subroutine innerr\_1 (y, w)
  - subroutine to compute the inner product with  $R^{-1}$
- subroutine innerhqht\_plus\_r\_1 (y, w)
  - subroutine to compute the inner product with  $(HQH^T + R)^{-1}$
- subroutine <a href="bprime">bprime</a> (y, x, QHtR\_1y, normaln, betan)
  - subroutine to calculate nudging term and correlated random errors efficiently

#### 5.18.1 Function/Subroutine Documentation

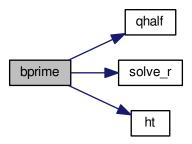

5.18.1.1 subroutine bprime ( real(kind=rk), dimension(obs\_dim,pf%count), intent(in) y, real(kind=rk), dimension(state\_dim,pf%count), intent(out) x, real(kind=rk), dimension(state\_dim,pf%count), intent(out) QHtR\_1y, real(kind=rk), dimension(state\_dim,pf%count), intent(in) normaln, real(kind=rk), dimension(state\_dim,pf%count), intent(out) betan )

subroutine to calculate nudging term and correlated random errors efficiently

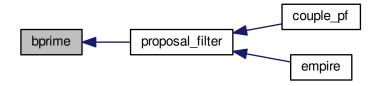

#### **Parameters**

in	У	(obs_dim,pf%count) vectors of innovations $y - H(x^{n-1})$
out	X	(state_dim,pf%count) vectors of $\rho H^T R^{-1}[y-H(x^{n-1})]$
out	QHtR_1y	(state_dim,pf%count) vectors of $\rho QH^TR^{-1}[y-H(x^{n-1})]$
in	normaln	(state_dim,pf%count) uncorrelated random vectors such that normaln(:,i) $\sim$
		$\mathscr{N}(0,I)$
out	betan	(state_dim,pf%count) correlated random vectors such that betan(:,i) ~
		$\mathscr{N}(0,Q)$

Here is the call graph for this function:

Here is the caller graph for this function:

5.18.1.2 subroutine innerhqht\_plus\_r\_1 ( real(kind=rk), dimension(obs\_dim), intent(in) y, real(kind=rk), intent(out) w ) subroutine to compute the inner product with  $(HQH^T+R)^{-1}$ 

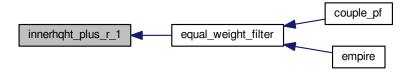

#### **Parameters**

in	у	vector in observation space
out	W	scalar with value $y^T R^{-1} y$

Here is the call graph for this function:

Here is the caller graph for this function:

5.18.1.3 subroutine innerr\_1 ( real(kind=rk), dimension(obs\_dim,pf%count), intent(in) y, real(kind=rk), dimension(pf%count), intent(out) w )

subroutine to compute the inner product with  $R^{-1}$ 

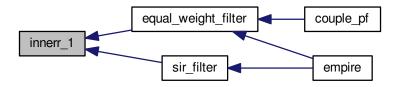

## Parameters

in	у	multiple vectors in observation space (pf%count of them)
out	W	multiple scalars (pf%count) where w(i) has the value $y(:,i)^T R^{-1} y(:,i)$

Here is the call graph for this function:

Here is the caller graph for this function:

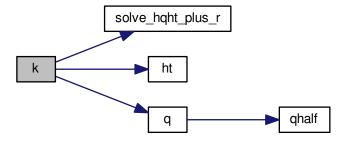

5.18.1.4 subroutine k ( real(kind=rk), dimension(obs\_dim,pf%count), intent(in) y, real(kind=rk), dimension(state\_dim,pf%count), intent(out) x )

Subroutine to apply K to a vector  $\mathbf{y}$  in observation space where  $K := QH^T(HQH^T + R)^{-1}$ .

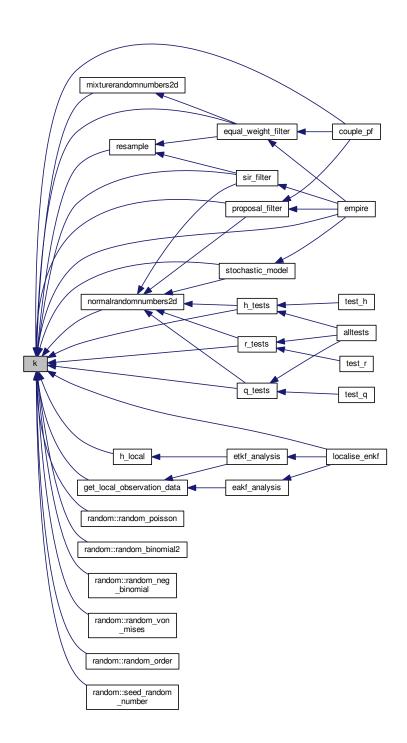

#### **Parameters**

in	У	vector in observation space
out	X	vector in state space

Here is the call graph for this function:

Here is the caller graph for this function:

# 5.19 src/operations/perturb\_particle.f90 File Reference

## **Functions/Subroutines**

subroutine perturb\_particle (x)

• subroutine update\_state (state, fpsi, kgain, betan)

Subroutine to update the state.

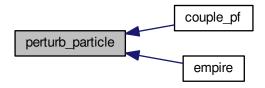

#### 5.19.1 Function/Subroutine Documentation

5.19.1.1 subroutine perturb\_particle ( real(kind=rk), dimension(state\_dim), intent(inout) x )

Subroutine to perturb state vector with normal random vector drawn from  $\mathcal{N}(0,Q)$ . Here is the call graph for this function:

Here is the caller graph for this function:

5.19.1.2 subroutine update\_state ( real(kind=rk), dimension(state\_dim), intent(out) *state*, real(kind=rk), dimension(state\_dim), intent(in) *fpsi*, real(kind=rk), dimension(state\_dim), intent(in) *kgain*, real(kind=rk), dimension(state\_dim), intent(inout) *betan* )

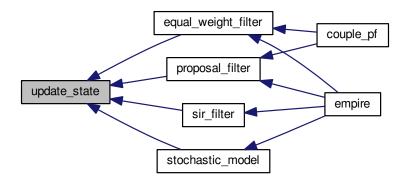

Subroutine to update the state.

This can be changed for the specific model if it needs to be

#### **Parameters**

in	fpsi	deterministic model update $f(x^{n-1})$
in	kgain	nudging term
in,out	betan	Stochastic term
out	state	The updated state vector
