EMPIRE Data Assimilation Documentation

Author

Philip A. Browne p.browne@reading.ac.uk

Date

Time-stamp: <2014-09-24 16:15:36 pbrowne>

1.1 Downloading

These codes are hosted on www.bitbucket.org and can be attained with the following commands:

```
git clone git@bitbucket.org:pbrowne/empire-data-assimilation.git
```

or

wget https://bitbucket.org/pbrowne/empire-data-assimilation/get/aa31fdfc3912.zip && gunzip aa31fdfc3912.zip

Copyright

These codes are distributed under the GNU GPU v3 Licence. See LICENCE.txt.

1.2 Compiling

1.2.1 Compilation of the source code

The Makefile must be editted for the specific compiler setup. In the main directory you will find the file Makefile. Edit the variables as follows:

- FC The fortran compiler
- FCOPTS The options for the fortran compiler
- LIB_LIST The libraries to be called. Note this must include BLAS

To compile the source code, simply then type the command

If successful, the following executables are created in the bin/ folder:

- · empire
- · alltests
- · test h
- · test hghtr
- test_q
- test_r

To remove the object and executable files if compilation fails for some reason, run the following:

make clean

1.2.2 Compilation of the documentation

Documentation of the code is automatically generated using Doxygen, dot and pdflatex.

All of these packages must be installed for the following to work.

make docs

This will make an html webpage for the code, the mainpage for which is located in doc/html/index.html.

A latex version of the documentation will be built to the file doc/latex/refman.pdf.

To simply make the html version of the documentation (if pdflatex is not available) then use the command

make doc_html

1.3 Customising for specific models

This is where the science and all the effort should happen!!

The file model_specific.f90 should be editted for the specific model which you wish to use. This contains a number of subroutines which need to be adapted for the model and the observation network. We list these subsequently.

- configure_model This is called early in the code and can be used to read in any data from files before subsequently using them in the below operations.
- h This is the observation operator
- ht This is the transpose of the observation operator
- r This is the observation error covariance matrix R
- rhalf This is the square root of the observation error covariance matrix $R^{\frac{1}{2}}$
- solve_r This is a linear solve with the observation error covariance matrix, i.e. given b, find x such that Rx = b or indeed, $x = R^{-1}b$
- q This is the model error covariance matrix Q
- qhalf This is the square root model error covariance matrix $Q^{\frac{1}{2}}$
- solve hight plus r This is a linear solve with the matrix $(HQH^T + R)$

Not all of these subroutines will be required for each filtering method you wish to use, so it may be advantageous to only implement the necessary ones.

1.4 Testing 3

1.4 Testing

You can test your user supplied routines by running the test codes found in the folder bin/.

These are by no means full-proof ways of ensuring that you have implemented things correctly, but should at least check what you have done for logical consistency.

For example, they will test if $HH^Tx = x$, and if $Q^{\frac{1}{2}}Q^{\frac{1}{2}}x = Qx$ for various different vectors x.

1.5 Linking to your model using EMPIRE

Full instructions on how to put the EMPIRE MPI commands into a new model can be found at www.met.-reading.ac.uk/~darc/empire.

1.6 Running

For example, to run N_MDL copies of the model with N_DA copies of empire, then the following are possible:

```
mpirun -np N_MDL model_executable : -np N_DA empire
aprun -n N_MDL -N N_MDL model_executable : -n N_DA -N N_DA empire
```

The empire executable is controlled by the namelist data file pf_parameters.dat. As such, this file should be put in the directory where empire is executed.

1.7 Bug Reports and Functionality Requests

While the code is not too large, you may email me the issue or request here.

However there is a webpage set up for this:

https://bitbucket.org/pbrowne/empire-data-assimilation/issues

EMPIRE	Data	Assimilation	Documentation

Chapter 2

Data Type Index

2.1 Data Types List

Here are the data types with brief descriptions:

comms	
Module containing EMPIRE coupling data	9
histogram_data	
Module to control what variables are used to generate rank histograms	11
hqht_plus_r	12
pf_control	
Module pf_control holds all the information to control the the main program	12
pf_control::pf_control_type	16
qdata	
Module as a place to store user specified data for Q	20
random	
A module for random number generation from the following distributions:	22
rdata	
Module to hold user supplied data for R observation error covariance matrix $\ldots \ldots \ldots$	31
sizes	
Module that stores the dimension of observation and state spaces	33

Chapter 4

Data Type Documentation

4.1 comms Module Reference

Module containing EMPIRE coupling data.

Public Member Functions

- subroutine allocate data
- subroutine deallocate_data
- subroutine initialise_mpi

subroutine to make EMPIRE connections and saves details into pf_control module

Public Attributes

- integer cpl_mpi_comm
- integer mype_id
- integer myrank
- integer nproc
- integer pf_mpi_comm
- integer pfrank
- integer npfs
- integer, dimension(:), allocatable gblcount
- integer, dimension(:), allocatable gbldisp

4.1.1 Detailed Description

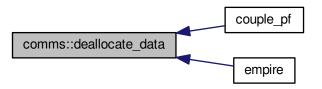

Module containing EMPIRE coupling data.

4.1.2 Member Function/Subroutine Documentation

4.1.2.1 subroutine comms::allocate_data ()

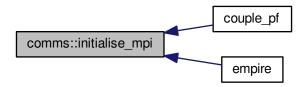

4.1.2.2 subroutine comms::deallocate_data ()

Here is the caller graph for this function:

4.1.2.3 subroutine comms::initialise_mpi ()

subroutine to make EMPIRE connections and saves details into pf_control module Here is the caller graph for this function:

4.1.3 Member Data Documentation

- 4.1.3.1 integer comms::cpl_mpi_comm
- 4.1.3.2 integer, dimension(:), allocatable comms::gblcount
- 4.1.3.3 integer, dimension(:), allocatable comms::gbldisp
- 4.1.3.4 integer comms::mype_id
- 4.1.3.5 integer comms::myrank
- 4.1.3.6 integer comms::npfs
- 4.1.3.7 integer comms::nproc
- 4.1.3.8 integer comms::pf_mpi_comm

4.1.3.9 integer comms::pfrank

The documentation for this module was generated from the following file:

• src/utils/comms.f90

4.2 histogram_data Module Reference

Module to control what variables are used to generate rank histograms.

Public Member Functions

- subroutine load_histogram_data subroutine to read from variables_hist.dat which variables to be used to make the rank histograms
- subroutine kill_histogram_data
 subroutine to clean up arrays used in rank histograms

Public Attributes

- integer, dimension(:), allocatable rank_hist_list
- integer, dimension(:), allocatable rank_hist_nums
- integer rhl n
- integer rhn_n

4.2.1 Detailed Description

Module to control what variables are used to generate rank histograms.

4.2.2 Member Function/Subroutine Documentation

4.2.2.1 subroutine histogram_data::kill_histogram_data()

subroutine to clean up arrays used in rank histograms

4.2.2.2 subroutine histogram_data::load_histogram_data ()

subroutine to read from variables_hist.dat which variables to be used to make the rank histograms

4.2.3 Member Data Documentation

- 4.2.3.1 integer, dimension(:), allocatable histogram_data::rank_hist_list

4.4 pf_control Module Reference

module pf_control holds all the information to control the the main program

Collaboration diagram for pf_control:

Data Types

• type pf_control_type

Public Member Functions

- subroutine set_pf_controls
 - subroutine to ensure pf_control data is ok
- subroutine parse_pf_parameters

subroutine to read the namelist file and save it to pf datatype Here we read pf_parameters.dat

- subroutine allocate_pf
 - subroutine to allocate space for the filtering code
- subroutine deallocate_pf

subroutine to deallocate space for the filtering code

Public Attributes

• type(pf_control_type) pf

the derived data type holding all controlling data

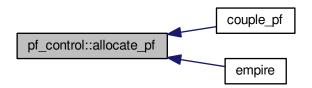

4.4.1 Detailed Description

module pf_control holds all the information to control the the main program

4.4.2 Member Function/Subroutine Documentation

4.4.2.1 subroutine pf_control::allocate_pf()

subroutine to allocate space for the filtering code

4.4.2.2 subroutine pf_control::deallocate_pf ()

subroutine to deallocate space for the filtering code

4.4.2.3 subroutine pf_control::parse_pf_parameters ()

subroutine to read the namelist file and save it to pf datatype Here we read pf_parameters.dat pf_parameters.dat is a fortran namelist file. As such, within it there must be a line beginning &pf_params

To make it (probably) work, ensure there is a forward slash on the penultimate line and a blank line to end the file This is just the fortran standard for namelists though.

On to the content...in any order, the pf_parameters.dat may contain the following things: Integers:

- time_obs
- time_bwn_obs

Reals, double precision:

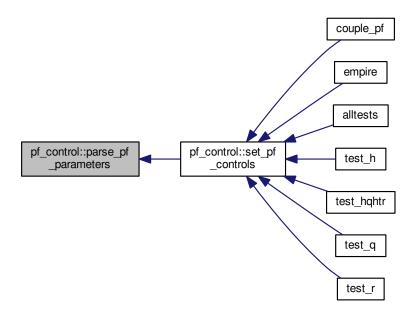

- nudgefac
- nfac
- ufac
- Qscale
- keep

2 Characters:

- type
- 1 Character:
 - init

Logicals:

- gen_Q
- gen_data
- use_talagrand
- use_weak
- use_var
- use_traj
- use_rmse
- human_readable

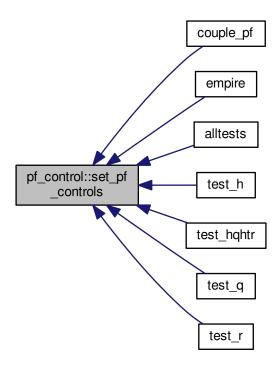

4.4.2.4 subroutine pf_control::set_pf_controls ()

subroutine to ensure pf_control data is ok

Here is the call graph for this function:

4.4.3 Member Data Documentation

4.4.3.1 type(pf_control_type) pf_control::pf

the derived data type holding all controlling data

The documentation for this module was generated from the following file:

• src/controlers/pf_control.f90

4.5 pf_control::pf_control_type Type Reference

Public Attributes

• integer nens

the total number of ensemble members

- real(kind=kind(1.0d0)), dimension(:), allocatable weight
- the negative log of the weights of the particlesinteger time_obs

the number of observations we will assimilate

• integer time_bwn_obs

the number of model timesteps between observations

• real(kind=kind(1.0d0)) nudgefac

the nudging factor

logical gen_data

true generates synthetic obs for a twin experiment

· logical gen_q

true attempts to build up Q from long model run

· logical human readable

unused

• integer timestep =0

the current timestep as the model progresses

real(kind=kind(1.0d0)), dimension(:,:), allocatable psi

state vector of ensemble members on this mpi process

• real(kind=kind(1.0d0)), dimension(:), allocatable mean

mean state vector

• real(kind=kind(1.0d0)) nfac

standard deviation of normal distribution in mixture density

real(kind=kind(1.0d0)) ufac

half width of the uniform distribution in mixture density

- real(kind=kind(1.0d0)) efac
- real(kind=kind(1.0d0)) keep

proportion of particles to keep in EWPF EW step

• real(kind=kind(1.0d0)) time

dunno

• real(kind=kind(1.0d0)) qscale

scalar to multiply Q by

integer couple_root

empire master processor

logical use_talagrand

switch if true outputs rank histograms

· logical use_weak

switch unused

• logical use_mean

switch if true outputs ensemble mean

logical use_var

switch if true outputs ensemble variance

logical use_traj

switch if true outputs trajectories

logical use_rmse

switch if true outputs Root Mean Square Errors

integer, dimension(:,:),

allocatable talagrand

storage for rank histograms

• integer count

number of ensemble members associated with this MPI process

• integer, dimension(:), allocatable particles

particles associates with this MPI process

character(2) type

which filter to use

character(1) init

which method to initialise ensemble

4.5.1 Member Data Documentation

4.5.1.1 integer pf_control::pf_control_type::count

number of ensemble members associated with this MPI process

4.5.1.2 integer pf_control::pf_control_type::couple_root

empire master processor

4.5.1.3 real(kind=kind(1.0d0)) pf_control::pf_control_type::efac

Functions/Subroutines

- subroutine stochastic_model
 subroutine to simply move the model forward in time one timestep PAB 21-05-2013
- subroutine check_scaling (x, fx, b, scales)

5.16.1 Function/Subroutine Documentation

- 5.16.1.1 subroutine check_scaling (real(kind=rk), dimension(state_dim), intent(in) x, real(kind=rk), dimension(state_dim), intent(in) fx, real(kind=rk), dimension(state_dim), intent(in) b, real(kind=rk), dimension(9), intent(inout) scales)
- 5.16.1.2 subroutine stochastic_model ()

subroutine to simply move the model forward in time one timestep PAB 21-05-2013

Here is the call graph for this function:

Here is the caller graph for this function:

5.17 src/operations/gen_rand.f90 File Reference

Functions/Subroutines

- subroutine uniformrandomnumbers1d (minv, maxv, n, phi)
 - generate one dimension of uniform random numbers
- subroutine normalrandomnumbers1d (mean, stdev, n, phi)
 - generate one dimension of Normal random numbers
- subroutine normalrandomnumbers2d (mean, stdev, n, k, phi)
 - generate two dimensional Normal random numbers
- subroutine mixturerandomnumbers1d (mean, stdev, ufac, epsi, n, phi, uniform)
 - generate one dimensional vector drawn from mixture density
- subroutine mixturerandomnumbers2d (mean, stdev, ufac, epsi, n, k, phi, uniform)
 - generate two dimensional vector, each drawn from mixture density
- subroutine random_seed_mpi (pfid)
 - Subroutine to set the random seed across MPI threads.

5.17.1 Function/Subroutine Documentation

5.17.1.1 subroutine mixturerandomnumbers1d (real(kind=kind(1.0d0)), intent(in) *mean,* real(kind=kind(1.0d0)), intent(in) *stdev,* real(kind=kind(1.0d0)), intent(in) *ufac,* real(kind=kind(1.0d0)), intent(in) *epsi,* integer, intent(in) *n,* real(kind=kind(1.0d0)), dimension(n), intent(out) *phi,* logical, intent(out) *uniform*)

generate one dimensional vector drawn from mixture density

Parameters

in	mean	Mean of normal distribution
in	stdev	Standard deviation of normal distribution
in	ufac	half-width of uniform distribution that is centered on the mean
in	epsi	Proportion controlling mixture draw. if random_number > epsi then draw from
		uniform, else normal
in	n	size of output vector
out	phi	n dimensional mixture random numbers
	.,	T ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' ' '
out	uniform	True if mixture drawn from uniform. False if drawn from normal

Here is the call graph for this function:

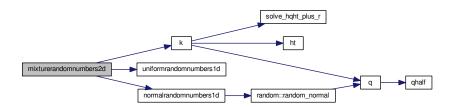

5.17.1.2 subroutine mixturerandomnumbers2d (real(kind=kind(1.0d0)), intent(in) *mean*, real(kind=kind(1.0d0)), intent(in) *stdev*, real(kind=kind(1.0d0)), intent(in) *ufac*, real(kind=kind(1.0d0)), intent(in) *epsi*, integer, intent(in) *n*, integer, intent(in) *k*, real(kind=kind(1.0d0)), dimension(n,k), intent(out) *phi*, logical, dimension(k), intent(out) *uniform*)

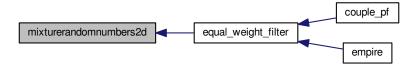

generate two dimensional vector, each drawn from mixture density

Parameters

in	mean	Mean of normal distribution
in	stdev	Standard deviation of normal distribution
in	ufac	half-width of uniform distribution that is centered on the mean
in	epsi	Proportion controlling mixture draw. if random_number > epsi then draw from
		uniform, else normal
in	n	first dimension of output vector
in	k	second dimension of output vector
out	phi	n,k dimensional mixture random numbers
out	uniform	k dimensional logical with uniform(i) True if phi(:,i) drawn from uniform. False if
		drawn from normal

Here is the caller graph for this function:

5.17.1.3 subroutine normalrandomnumbers1d (real(kind=rk), intent(in) *mean,* real(kind=rk), intent(in) *stdev,* integer, intent(in) *n,* real(kind=rk), dimension(n), intent(out) *phi*)

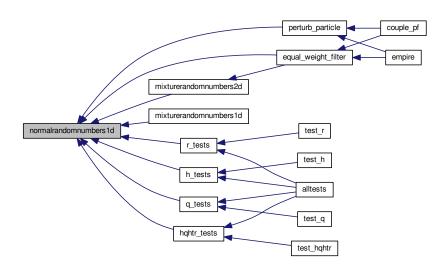

generate one dimension of Normal random numbers

Parameters

in	n	size of output vector
in	mean	mean of normal distribution
in	stdev	Standard Deviation of normal distribution
out	phi	n dimensional normal random numbers

Here is the call graph for this function:

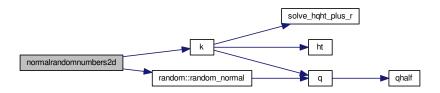

5.17.1.4 subroutine normalrandomnumbers2d (real(kind=rk), intent(in) *mean*, real(kind=rk), intent(in) *stdev*, integer, intent(in) *n*, integer, intent(in) *k*, real(kind=rk), dimension(n,k), intent(out) *phi*)

generate two dimensional Normal random numbers

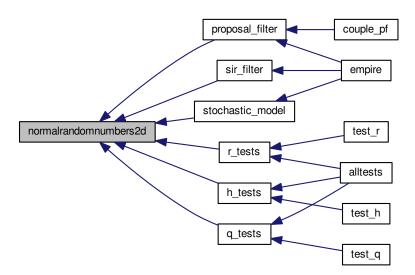

Parameters

in	n	first dimension of output vector
in	k	second dimension of output vector
in	mean	mean of normal distribution
in	stdev	Standard Deviation of normal distribution
out	phi	n,k dimensional normal random numbers

Here is the call graph for this function:

Here is the caller graph for this function:

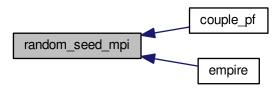

5.17.1.5 subroutine random_seed_mpi (integer, intent(in) pfid)

Subroutine to set the random seed across MPI threads.

Parameters

×			
	in	pfid	The process identifier of the MPI process

Here is the caller graph for this function:

5.17.1.6 subroutine uniformrandomnumbers1d (real(kind=rk), intent(in) *minv*, real(kind=rk), intent(in) *maxv*, integer, intent(in) *n*, real(kind=rk), dimension(n), intent(out) *phi*)

generate one dimension of uniform random numbers

Parameters

in	n	size of output vector
in	minv	minimum value of uniform distribution
in	maxv	maximum value of uniform distribution
out	phi	n dimensional uniform random numbers

Here is the caller graph for this function:

5.18 src/operations/operator_wrappers.f90 File Reference

Functions/Subroutines

- subroutine k (y, x)
 - Subroutine to apply K to a vector y in observation space where $K := QH^T(HQH^T + R)^{-1}$.
- subroutine innerr_1 (y, w)
 - subroutine to compute the inner product with R^{-1}
- subroutine innerhqht_plus_r_1 (y, w)
 - subroutine to compute the inner product with $(HQH^T + R)^{-1}$
- subroutine bprime (y, x, QHtR_1y, normaln, betan)
 - subroutine to calculate nudging term and correlated random errors efficiently

5.18.1 Function/Subroutine Documentation

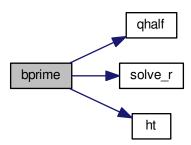

5.18.1.1 subroutine bprime (real(kind=rk), dimension(obs_dim,pf%count), intent(in) y, real(kind=rk), dimension(state_dim,pf%count), intent(out) x, real(kind=rk), dimension(state_dim,pf%count), intent(out) QHtR_1y, real(kind=rk), dimension(state_dim,pf%count), intent(in) normaln, real(kind=rk), dimension(state_dim,pf%count), intent(out) betan)

subroutine to calculate nudging term and correlated random errors efficiently

Parameters

in	у	(obs_dim,pf%count) vectors of innovations $y - H(x^{n-1})$
out	X	(state_dim,pf%count) vectors of $\rho H^T R^{-1}[y - H(x^{n-1})]$
out	QHtR_1y	(state_dim,pf%count) vectors of $\rho QH^TR^{-1}[y-H(x^{n-1})]$
in	normaln	(state_dim,pf%count) uncorrelated random vectors such that normaln(:,i) \sim
		$\mathscr{N}(0,I)$
out	betan	(state_dim,pf%count) correlated random vectors such that betan(:,i) ~
		$\mathcal{N}(0,Q)$

Here is the call graph for this function:

Here is the caller graph for this function:

5.18.1.2 subroutine innerhqht_plus_r_1 (real(kind=rk), dimension(obs_dim), intent(in) y, real(kind=rk), intent(out) w) subroutine to compute the inner product with $(HQH^T+R)^{-1}$

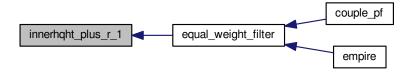

Parameters

in	у	vector in observation space
out	W	scalar with value $y^T R^{-1} y$

Here is the call graph for this function:

Here is the caller graph for this function:

5.18.1.3 subroutine innerr_1 (real(kind=rk), dimension(obs_dim,pf%count), intent(in) y, real(kind=rk), dimension(pf%count), intent(out) w)

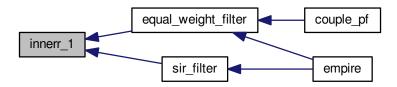

subroutine to compute the inner product with R^{-1}

Parameters

in	У	multiple vectors in observation space (pf%count of them)
out	W	multiple scalars (pf%count) where w(i) has the value $y(:,i)^T R^{-1} y(:,i)$

Here is the caller graph for this function:

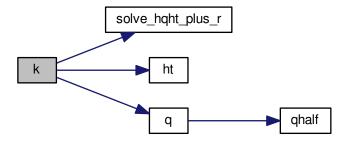

5.18.1.4 subroutine k (real(kind=rk), dimension(obs_dim,pf%count), intent(in) y, real(kind=rk), dimension(state_dim,pf%count), intent(out) x)

Subroutine to apply K to a vector \mathbf{y} in observation space where $K := QH^T(HQH^T + R)^{-1}$.

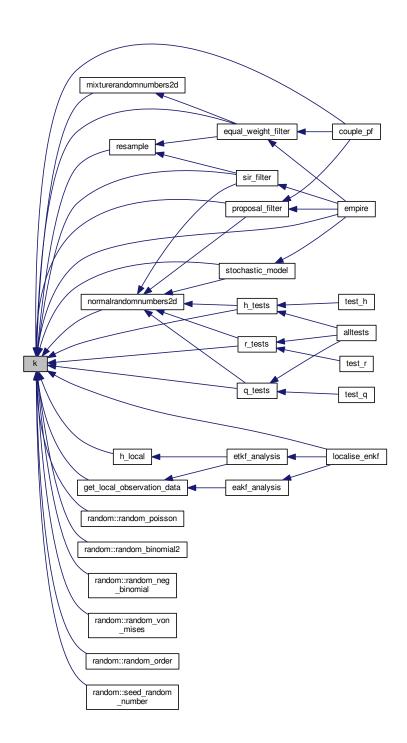

Parameters

in	У	vector in observation space
out	X	vector in state space

Here is the call graph for this function:

Here is the caller graph for this function:

5.19 src/operations/perturb_particle.f90 File Reference

Functions/Subroutines

subroutine perturb_particle (x)

Subroutine to perturb state vector with normal random vector drawn from $\mathcal{N}(0,Q)$.

• subroutine update_state (state, fpsi, kgain, betan)

Subroutine to update the state.

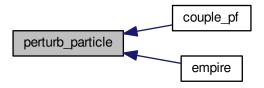

5.19.1 Function/Subroutine Documentation

5.19.1.1 subroutine perturb_particle (real(kind=rk), dimension(state_dim), intent(inout) x)

Subroutine to perturb state vector with normal random vector drawn from $\mathcal{N}(0,Q)$. Here is the call graph for this function:

Here is the caller graph for this function:

5.19.1.2 subroutine update_state (real(kind=rk), dimension(state_dim), intent(out) *state*, real(kind=rk), dimension(state_dim), intent(in) *fpsi*, real(kind=rk), dimension(state_dim), intent(in) *kgain*, real(kind=rk), dimension(state_dim), intent(inout) *betan*)

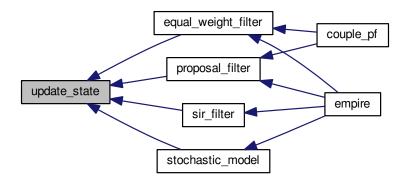

Subroutine to update the state.

This can be changed for the specific model if it needs to be

Parameters

in	fpsi	deterministic model update $f(x^{n-1})$
in	kgain	nudging term
in,out	betan	Stochastic term
out	state	The updated state vector

Data Types

· module comms

Module containing EMPIRE coupling data.

5.28 src/utils/data_io.f90 File Reference

Functions/Subroutines

• subroutine get_observation_data (y)

Subroutine to read observation from a file Uses pftimestep to determine which observation to read.

• subroutine save_observation_data (y)

Subroutine to save observation to a file Uses pftimestep to determine which observation to save.

subroutine save_truth (x)

Subroutine to save truth to a file

• subroutine output_from_pf

subroutine to ouput data from the filter

5.28.1 Function/Subroutine Documentation

5.28.1.1 subroutine get_observation_data (real(kind=rk), dimension(obs_dim), intent(out) y)

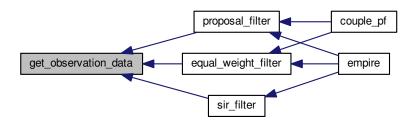

Subroutine to read observation from a file

Uses pftimestep to determine which observation to read.

Parameters

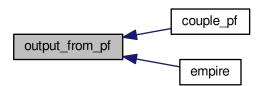

out y The observation	
-----------------------	--

Here is the caller graph for this function:

5.28.1.2 subroutine output_from_pf ()

subroutine to ouput data from the filter Here is the caller graph for this function:

5.28.1.3 subroutine save_observation_data (real(kind=rk), dimension(obs_dim), intent(in) y)

Subroutine to save observation to a file

Uses pftimestep to determine which observation to save.

Parameters

in	У	The observation
----	---	-----------------

Here is the caller graph for this function:

5.28.1.4 subroutine save_truth (real(kind=rk), dimension(state_dim), intent(in) x)

Subroutine to save truth to a file

.

Parameters

in	X	The state vector
----	---	------------------

Here is the caller graph for this function:

5.29 src/utils/diagnostics.f90 File Reference

Functions/Subroutines

subroutine diagnostics

Subroutine to give output diagnositics such as rank histograms and trajectories.

· subroutine trajectories

subroutine to output trajectories

5.29.1 Function/Subroutine Documentation

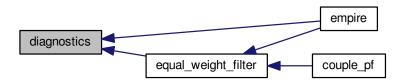

5.29.1.1 subroutine diagnostics ()

Subroutine to give output diagnositics such as rank histograms and trajectories.

Here is the call graph for this function:

Here is the caller graph for this function:

5.29.1.2 subroutine trajectories ()

subroutine to output trajectories

Here is the caller graph for this function:

Functions/Subroutines

· subroutine genq

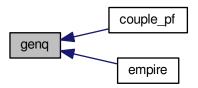

Subroutine to estimate Q from a long model run.

5.30.1 Function/Subroutine Documentation

5.30.1.1 subroutine genq ()

Subroutine to estimate Q from a long model run.

Here is the caller graph for this function:

5.31 src/utils/histogram.f90 File Reference

Data Types

• module histogram_data

Module to control what variables are used to generate rank histograms.

5.32 src/utils/quicksort.f90 File Reference

Functions/Subroutines

- recursive subroutine quicksort_d (a, na)
 - subroutine to sort using the quicksort algorithm
- subroutine insertionsort_d (A, nA)

subroutine to sort using the insertionsort algorithm

5.32.1 Function/Subroutine Documentation

5.32.1.1 subroutine insertionsort_d (real(kind=kind(1.0d0)), dimension(na), intent(inout) A, integer, intent(in) nA)

subroutine to sort using the insertionsort algorithm

Parameters

in,out	а	array of doubles to be sorted
in	na	dimension of array a

Here is the caller graph for this function:

5.32.1.2 recursive subroutine quicksort_d (real(kind=kind(1.0d0)), dimension(na), intent(inout) a, integer, intent(in) na)

subroutine to sort using the quicksort algorithm

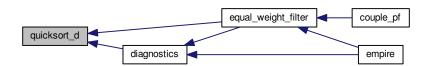

Parameters

in,out	а	array of doubles to be sorted
in	na	dimension of array a

Here is the call graph for this function:

Here is the caller graph for this function:

5.33 src/utils/random_d.f90 File Reference

Data Types

module random

A module for random number generation from the following distributions:
